

MINI PROJECT PRESENTATION

DEVHABIT

Presented by: Tech Titans

About Me

Project : DevHabit

- Envisioning a world where learning is personalized, engaging, and empowering, building the Devhabit **web-based** platform. Through this, we're set to revolutionize skill development and personal growth, tailoring experiences to individual learners.

What is devhabit?

- Ever wondered, "What if I had a day-by-day skill-learning guide?" Someone to mentor and support you every day. Now, picture this: getting a step-by-step roadmap every day, tailored just for you. Plus, you can pick how many days it takes – your choice. That's what makes us different.
- And at the end of each day you will share your learning to the personal AI mentor for verification and it will provide you a feedback and suggestion according to your learning, yes you read it right.

Domain:

java

Number of Days:

16

GENERATE ROADMAP

Roadmap

Day	Description	Tasks
Day 1	Learn the basics of Java.	<input type="checkbox"/> Install the Java Development Kit (JDK) <input type="checkbox"/> Learn the basic syntax of Java <input type="checkbox"/> Learn the basic data types in Java
Day 2	Learn about control flow in Java.	<input type="checkbox"/> Learn about if-else statements <input type="checkbox"/> Learn about switch statements <input type="checkbox"/> Learn about for and while loops
Day 3	Learn about classes and objects in Java.	<input type="checkbox"/> Learn about classes and objects <input type="checkbox"/> Learn about constructors <input type="checkbox"/> Learn about access modifiers

GENERATE ROADMAP

Roadmap

Day	Task	Learn about
Day 1	Learn about the basic syntax of Java.	<div>Learn about the basic syntax of Java.</div>
Day 2	Learn about variables and data types in Java.	<div>Learn about variables and data types in Java.</div>
Day 3	Learn about control structures in Java.	<div>Learn about control structures in Java.</div>
Day 4	Learn about arrays in Java.	<div>Learn about arrays in Java.</div>
Day 5	Learn about packages and exceptions in Java.	<div><div><input type="checkbox"/> Learn about abstract classes and interfaces</div><div><input type="checkbox"/> Learn about packages</div><div><input type="checkbox"/> Learn about exceptions</div><div><input type="checkbox"/> Learn about try-catch blocks</div></div>
Day 6	Learn about collections in Java.	<div><div><input type="checkbox"/> Learn about the List interface</div><div><input type="checkbox"/> Learn about the Set interface</div><div><input type="checkbox"/> Learn about the Map interface</div></div>

Task Verification : Learn the basic syntax of Java

Your Learning:

Java's basic syntax involves using classes and methods, declaring variables, using control structures like loops and conditionals, and adhering to strict case sensitivity. Semicolons end statements, curly braces define code blocks, and the "public static void main(String[] args)" method is the entry point for Java

Verify

Feedback:

Your response covers the basic syntax of Java quite well. A few more examples of control structures and variable declarations would be helpful.

Description:

In this task, you are asked to provide feedback on a response to the question: Java's basic syntax involves using classes and methods, declaring variables, using control structures like loops and conditionals, and adhering to strict case sensitivity. Semicolons end statements, curly braces define code blocks, and the "public static void main(String[] args)" method is the entry point for Java programs.

Rating: 8

Apps That Miss the Mark

*Existing apps like **Codecademy** and **SoloLearn** offer valuable learning resources, they fall short in providing structured daily guidance, estimated timeframes, streak-based motivation, and a robust community platform.*

Limitations

- *Lack of Time Estimation*
- *Limited Daily Guidance*
- *Limited Progress Tracking*

Solution's Advantage

- *Detailed Roadmaps*
- *Daily Task System*
- *Streaks for Motivation*
